AI Enablement Engineer

Senior engineer (7 years) who builds the systems that make AI tooling safe and useful for real teams: custom subagents, compliance guardrails, review workflows, and self-updating documentation, shipped inside a HIPAA-regulated production environment. Daily hands-on fluency with Claude, MCP servers, and LiteLLM as delivery tools, not demos. Anthropic-certified architect (CCAR-P). The through-line back to the Navy: take a hard system, master it, then rewrite the training so the next person ramps faster.

Experience

Senior Full-Stack Software Engineer, consulting — Nashville, TN — Nov 2018 to Jul 2026

Client-facing delivery across nine engagements in healthcare and regulated industries. Repeatedly backfilled senior developers on short notice, which means fast context acquisition in codebases I did not write.

- Built AI enablement for a HIPAA-regulated delivery team on a Medicare care-coordination platform (.NET, React, AWS): custom subagents, HIPAA gates around AI workflows, code-review skills, and internal guardrails that let the team use AI daily without PHI exposure.
- Created an auto-updating engineering wiki using Claude as a persistent source of truth; owned the specs and wiki repository.
- Built a TEFCA clinical-data integration end to end behind a swappable mock/real provider seam, with HIPAA audit logging on every PHI access, PHI-safe error surfacing, and fail-fast config validation.
- Led development on a fintech modernization: reverse-engineered undocumented business logic for a ground-up rebuild; integrated Adobe, PowerBI, and Microsoft 365/SharePoint.
- Additional delivery: legacy-to-microservices migration (Angular, Java Spring Boot), an award-winning medical-education platform, an offline-first field PWA, insurance and radiation-therapy optimization systems.

United States Navy — 2009 to 2015

Cryptologic Technician Interpretive (E-5), honorable discharge. Graduated top of class at the Defense Language Institute in Mandarin Chinese (Provost Award, Martin J. Kellogg Award); led a joint-service team on advanced collection systems and rewrote the associated training programs.

Skills

AI tooling and enablement: Claude, MCP servers, LiteLLM, subagent design, guardrails and evaluation, prompt and workflow engineering · Documentation systems, internal tooling, developer onboarding · C#/.NET, Java, Spring Boot, Node.js, TypeScript, React, Angular · AWS (ECS Fargate, Aurora), Terraform, Docker, CI/CD · PostgreSQL, SQL Server, MongoDB · Python, scikit-learn · Cypress, xUnit, Vitest, Swagger/OpenAPI · Mandarin Chinese (professional proficiency)

Education and certifications

- Claude Certified Architect - Professional (CCAR-P), Anthropic, Jul 2026; Anthropic Foundations, Jul 2026; AWS Solutions Architect Associate in progress
- B.S. Computer Science (AI focus) and B.S. Neuroscience, University of Colorado Boulder; Certificate in Cognitive Science

- A.A. Chinese (Mandarin), Defense Language Institute, top of class · Full-Stack Web Development Certificate, Nashville Software School · B.A. Recording Technology, Middle Tennessee State University
